

Aquaforce

Premium Soil Wetter

THE PROFESSIONALS CHOICE

Highly penetrating non-ionic soil surfactant

- Premium soil surfactant
- For extreme situations in particular severely hydrophobic soils
- Long lasting
- Assists in breaking down hydrophobic build-up, water retention and rapid penetration
- Good even soil wetting qualities

Suitable for

Dry patch control in

- Home lawns and gardens
- Sporting Fields
- Cricket pitches
- Golf courses, fairways and tees
- Bowling greens
- All hydrophobic turf situations

Overcome water repellence & save water

- Reduces loss from evaporation & run-off
- Environmentally friendly and excellent in extreme conditions
- Enhances moisture uptake and retention around the root zone, improving plant health and vigour
- Easy hose on application that will continue to re-wet" soil for up to 3 months
- 2 litre container treats 200 m² of turf

General Information

A premium soil surfactant for premium performance. Combines highly penetrating properties whilst having the ability to attach onto soil particles, providing a water attracting surface to assist with water passing through the profile. Less phytotoxic than many other soil wetters with excellent long term soil wetting properties. Although a low phytotoxic risk, thorough watering of all soil wetting products is recommended. As well as being an extra safety mechanism, it also enhances their performance.

When used in combination with Bi-AGRA, it helps keep your lawn healthy and green during Perth's summer heat and water restrictions. Apply Aqua Force and then follow up with an application of BI-AGRA soil moisture retainer, a few days later.

Aquaforce premium wetting agent is recommended for use at the following times in WA
Spring (September/October), Summer (December/January) and Autumn (March/April) each year.
