

BIAGRA

Research conducted by Turfgrass Technology demonstrates the improved moisture retention and co-efficient of uniformity in the BIAGRA plot compared to the control plot. Irrigation/rain (R) was applied on the following days after the application of BIAGRA on Feb 22, 2010.

Feb 22	10mm	Feb 26	20mm	Mar 8	20mm
Mar 22	40mm (R)	April 4	10 mm	April 14	40mm (R)

On Mar 16, eight days after 20mm of irrigation was applied to both plots, the BIAGRA plot still had 9% soil moisture compared with 1.7% in the control plot.
